

Switzerland, Ticino

Registration area

The Canton Ticino is situated at the extreme south of Switzerland. It has a total area of 2812 km² and is bordered on the north by the Canton of Uri, on the east by Canton of Graubünden and Italy and on the south and west by Italy. The highest point is 3402 m and the lowest 194 m above sea level. The climate is temperate, with average temperatures varying from 4.0 in January to 21.8 in August, and the annual rainfall amounts to 1564 mm (1997). Air quality has been measured in Ticino from 1990: the annual average pollutant concentrations observed are 13 µg/m³ for SO₂, 44 µg/m³ for NO₂ and 218 µg/m³ O₃ (city of Lugano, 1996).

The population of the canton at 31 December 2000 was 309 357. The structure also reflects immigration in the age of economic activity: 73% of the population have Swiss nationality and 27% is foreign, mainly from Italy and the former Yugoslavia. The majority of the population is Christian, with 84% Roman Catholics. The official language is Italian. Employment distribution is: 1.7% in agriculture and forestry, 24.8% in industry and 71.8% in the service sector (census 2000).

Cancer care facilities

In 2000, there were five public regional hospitals and four zone hospitals, for a total of 1042 beds and 695 hospital and private practitioners in the canton. There are no population-based screening programmes in Canton Ticino. Spontaneous screening is well accepted in the population, for either breast or cervical cancer. There is one radiotherapy department for the entire region covered by the Cancer Registry. Opportunistic PSA testing is common in the population.

Registry structure and methods

The Cancer Registry of Canton Ticino was founded in 1995 by the local government. Collection of population-based data began in 1996. The Cantone Ticino provides most of the budget and additional funds are obtained from the Federal Ministry of Health, through the Swiss Association of Cancer Registries.

The Registry was founded on a cantonal law, based on a popular initiative. It is located at the Cantonal Institut of Pathology. One medical doctor and a data manager are responsible for active data collection and coding. A statistician is responsible of quality control and data

elaboration. Reporting of cancer cases is done on a voluntary basis. A web page is updated regularly (www.ti.ch/cancer). About 80% of cases are notified by the Cantonal Institute of Pathology and Cytology. Additional cases come from main hospitals, radiotherapy and oncology centres, haematology laboratory, oncologists, general practitioners and from cancer registries of Geneva, Vaud, Basel, Zürich and St Gallen (mostly skin cancer). Autopsy is performed on 3% of all deaths. Finally, death certificates with cancer diagnosis are scrutinised and additional information is found by mailing a questionnaire to the physician or by looking at the case notes in hospitals. Online control of inhabitants of the canton is performed at the Cantonal Office of Population Registry.

The Registry collects all malignant invasive and in situ tumours. The registration of basal-cell carcinoma is incomplete for the years 1996–2003. The following data are coded: personal identification number, tumour occurring before the registry was started personal data, date of first symptoms, date of morphology confirmation, topography, morphology, stage, diameter in mm and axillary node for breast cancer, basis of diagnosis, method of diagnosis, first treatment and date of death.

All information are checked and coded (according ICD-O-2) manually by the registry staff before entry in the computer. The computers themselves do preliminary plausibility test at data entry, and a second check is performed by the staff daily. Monthly several plausibility checks, like logical sequence of dates, validity of codes, morphology by topography, by sex and age (over 200 crosscheck) are performed in addition to the IARC Check programme.

Active follow-up of all patients with tumours is performed yearly. We have published a study of completeness:

http://www.ti.ch/DSS/DSP/IstCP/RCT/pdf_ppt/Relazioni_e_Poster/2005/GRELL05_completeness.pdf.

Use of the data

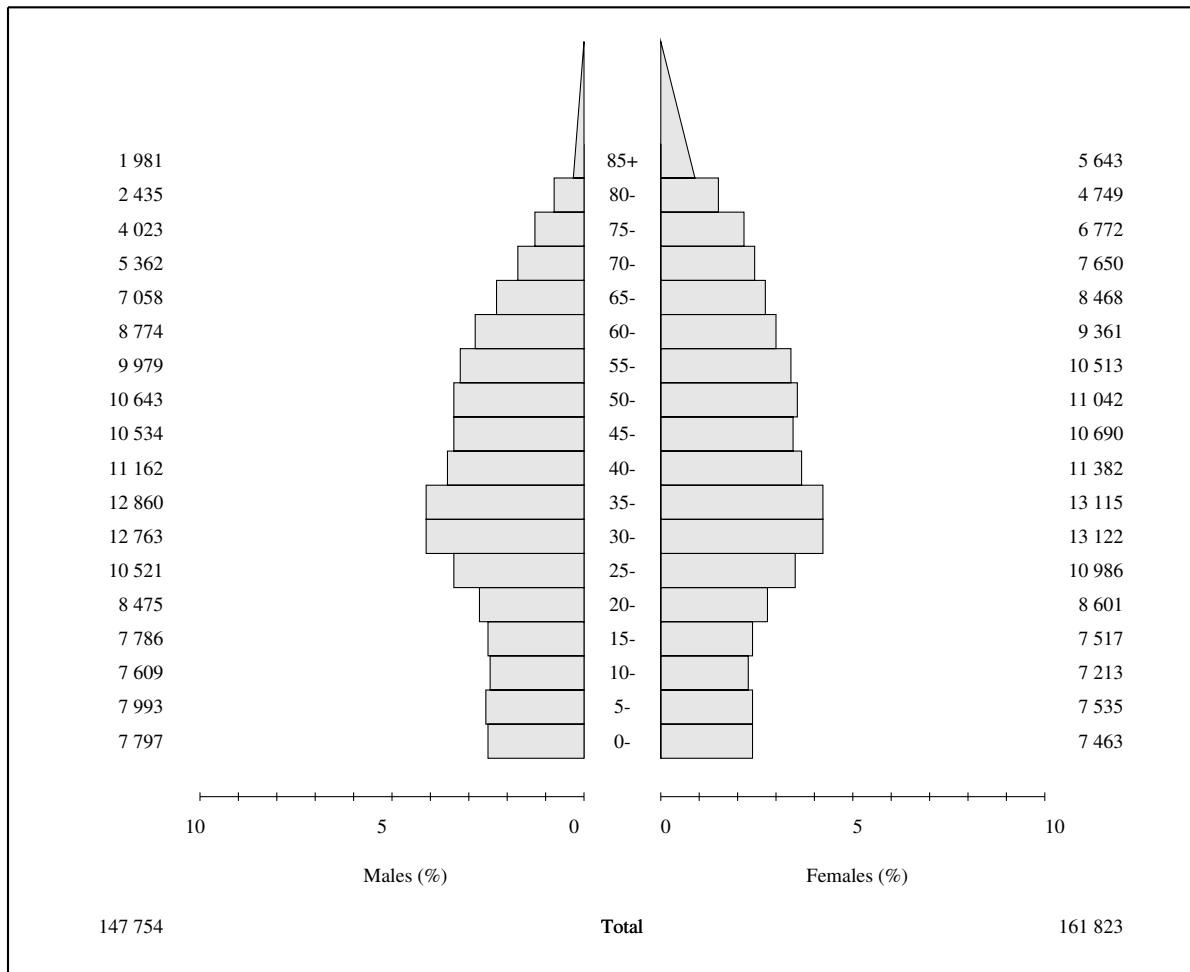

The Registry is currently involved in epidemiological research such as biomolecular epidemiology, survival analysis (EUROCARE), and other:

<http://www.ti.ch/DSS/DSP/IstCP/RCT/temi/studies.htm>.

Policymakers use our Cancer Registry data for planning and evaluation of health services. Please see the website for further information: www.ti.ch/tumori.
